CALL FOR PROPOSALS

POPULAR CULTURE, MEDIA & SCIENCE COMMUNICATION AND SCIENCE & TECHNOLOGY STUDIES

Calling All PhD Students in Popular Culture, Media & Science Communication and Science & Technology Studies

Do you have a PhD in the fields of Popular Culture, Science Communication and Science & Technology Studies, or related areas, and are you interested in doing a Postdoc in Australia – at the Australian National Centre for the Public Awareness of Science?

Check out the Feodor Lynen Postdoctoral Fellowship of the Alexander von Humboldt Foundation as we are looking for Postdocs exploring the links between Popular Entertainment/Culture and Science and Technology to take our interdisciplinary mission to the next level!

Popular entertainment has always been intertwined with the cutting edge of science and technology and it is a versatile frame for interpreting our relationship with technological and scientific advancement.

We are passionate about exploring popular entertainment as a site in and through which science and technology are represented in popular culture.

Projects may, for instance, investigate how technological inventions have shaped popular performance and the cultures it helps constitute – and how much of a mutual shaping this is.

So if you're interested in these topics and keen to partake in cutting-edge thinking and multi-method research get in touch with the potential host of your project, our member of the Humboldt Network Dr Anna-Sophie Jürgens.
